

Acme Robotics -- Annual Report 2025

Executive Summary

Acme Robotics delivered a solid year of growth in 2025, with total revenue increasing by 12% to \$45.2 million, driven primarily by strong demand in the APAC region and the successful launch of two new product lines.

Financial Highlights

Operating costs increased by 5% year-over-year, reflecting continued investment in headcount and cloud infrastructure to support scaling operations. Despite the increase in costs, operating margin improved slightly to 18.4%, up from 17.9% in the prior year.

Regional Performance

Singapore remained the company's largest market, contributing 38% of total revenue, followed by the broader APAC region at 29% and the Rest of World at 33%. Growth in Singapore was driven by enterprise contract renewals, while APAC ex-Singapore grew fastest at 21% year-over-year.

Outlook

Looking ahead to 2026, management expects continued double-digit revenue growth, supported by an expanding product portfolio and deeper penetration into Southeast Asian markets. Key risks include supply chain volatility and increased competition in the robotics sensor market.
